

- ① disperzija $E_{\alpha\beta}(p_k)$ in v originalni bazi!
- ② disperzije $n_{\alpha,p_k}, n_{\beta,p_k}$
- ③ M_k, v_k .

Bath 1:

$\mu(p) \rightarrow v(k)$

$$\Gamma_{kp}^{\lambda\mu} = \Gamma_{\lambda k \leftarrow \mu p} = \chi \frac{1}{1 + e^{\frac{E_{\lambda k} - E_{\mu p}}{T}}}$$

KONSTANTA ZA $\alpha \rightarrow \alpha, \alpha \rightarrow \beta, \beta \rightarrow \beta$

glej DB:

$$\frac{\Gamma_{kp}^{\lambda\mu}}{\Gamma_{pq}^{\nu\mu}} = e^{-(E_{\mu p} - E_{\nu q})/T} \quad \checkmark$$

Bath 2:

ENAKO KOT B1, samo:

$$\Gamma_{kp}^{\mu\nu} = \chi^{\mu\nu} \frac{1}{1 + e^{\frac{E_{\mu k} - E_{\nu p}}{T}}}$$

$$\chi = \begin{pmatrix} \chi^{\alpha\alpha} & \chi^{\alpha\beta} \\ -\chi^{\beta\alpha} & \chi^{\beta\beta} \end{pmatrix}$$

$$\chi^{\alpha\beta} = 2\chi^{\alpha\alpha}$$

$$\chi^{\alpha\alpha} = \chi^{\beta\beta}$$

χ od 1. kopli

ERTICANA JE NEODVISNO PORAČUNANA S $T > 0$, STANDARDNIM E.I. SELF-C. SETOM ENAČB.

Bath 3:

ISTO KOT DRAFT PAPER ZA DCS, edino:

$$\Gamma_{kp}^{\mu\nu} = \chi^{\mu\nu} \cdot f\left(\frac{E_{\mu k} - \mu}{T}\right) f\left(-\frac{E_{\nu p} - \mu}{T}\right) \leftarrow \text{fazni diagram } \textcircled{\text{zelo}} \text{ (tepi)}$$

odvisen od i-tega μ !

Karater shift verjetno?

$\chi^{\mu\nu}$: enako kot bath 2.

Bath 1
